Handling Instructions

Prior to casketing the body, ensure that the unit has been correctly assembly and that all toggles are securely in place.

Once the deceased is placed into the casket please adhere to the following important information:

1.

Prior to moving the casket or coffin, ensure that the lid is placed onto the unit and that all of the toggles are secured. ***Never lift the unit without the lid securely attached. Pushing or pulling from the side panels may result in a loss of structural integrity of the unit and possible damage.***

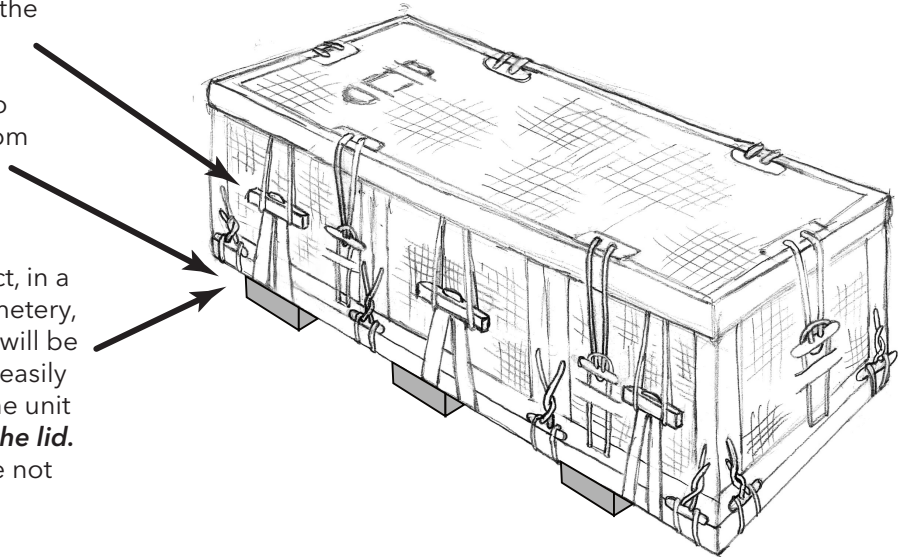

2.

When lifting the casket or coffin, lift using the handles with six people. If required, unhook the handles.

In the case of the Bamboo Cremation Container, lift from beneath the casket.

3.

When transporting this product, in a vehicle to the crematory or cemetery, be sure to elevate the end you will be removing first so that you can easily get your fingers underneath the unit to lift and pull. ***Never lift from the lid.*** (Blocks shown in diagram are not provided.)

When assembly this unit, do not force anything. If something is not fitting correctly, be sure to check that all toggles and closures were fully pulled through, make sure that everything is aligned correctly or re-adjust if needed.

This product is hand made from natural materials, so no two are alike and every unit will have minor imperfections that add to the charm of the product.
